

NANYANG TECHNOLOGICAL UNIVERSITY

SEMESTER II EXAMINATION 2024-2025

**MH1820 Introduction to Probability and  
Statistical Methods**

April/May 2025

Time allowed: 2 hours

---

**INSTRUCTIONS TO CANDIDATES**

1. This examination paper contains **FOUR (4)** questions and comprises **SEVEN (7)** printed pages, including the Appendix.
2. Answer **ALL** questions. The marks for each question are indicated at the beginning of each question.
3. Answer each question beginning on a **FRESH** page of the answer book.
4. This is a **RESTRICTED OPEN BOOK** exam. You are only allowed to bring into the examination hall **ONE DOUBLE-SIDED A4-SIZE REFERENCE SHEET WITH TEXTS HANDWRITTEN OR TYPED ON THE A4 PAPER WITHOUT ANY ATTACHMENTS** (e.g. sticky notes, post-it notes, gluing or stapling of additional papers).
5. Tables of some probability distributions are provided in the Appendix on Page 4-7.
6. Candidates may use calculators. However, they should write down systematically the steps in the workings.

**QUESTION 1. (30 Marks)**

- (a) Compute  $\mathbb{E}[X]$  and  $\text{Var}[X]$ , where  $X$  is a continuous random variable with PDF given by

$$f(x) = \begin{cases} \frac{3}{x^4}, & \text{for } x \geq 1, \\ 0, & \text{otherwise.} \end{cases}$$

- (b) If  $X$  has a normal distribution with mean  $\mu = 3$  and variance  $\sigma^2 = 9$ , find  $\mathbb{P}(|X - 1| < 2)$  in terms of  $\Phi(z)$ , the CDF of the standard normal random variable  $Z$ .

- (c) Two fair dice, A and B, are rolled independently, and let the possible outcomes be denoted by  $(a, b)$ , where  $a$  and  $b$  are values on dice A and B respectively. Let  $X$  be the number obtained on dice A, and  $Y$  be the largest value on the two dice. For example, if the outcome is  $(2, 5)$ , then  $X = 2$  and  $Y = 5$ ; if the outcome is  $(3, 3)$ , then  $X = 3$  and  $Y = 3$ , etc.

- (i) Find the joint probability mass function (PMF) of  $X$  and  $Y$ .
- (ii) Find  $\mathbb{P}(X \leq 3, Y \leq 3)$ .
- (iii) Compute  $\mathbb{E}[X|Y = y]$ . Express your answer in terms of  $y$ .

**QUESTION 2. (20 Marks)**

- (a) The number of points  $X$  scored by a player in a game is normally distributed with mean  $\mu = 80$  and variance  $\sigma^2$  which is unknown. Due to a recent lack of training, a coach suspects that the mean score by the player is now less than 80 points per game. To investigate this, a random sample of 30 games is selected. The sample has a mean score of 76 points with a standard deviation of 10 points.

- (i) Test the null hypothesis  $H_0: \mu = 80$  against the alternative hypothesis  $H_1: \mu < 80$ , with a significance level of  $\alpha = 0.05$ . What is the conclusion of the test?
- (ii) Construct a 90% confidence interval for the population variance  $\sigma^2$ .

- (b) Let  $X_1, \dots, X_{100}$  be an i.i.d sample drawn from a normal distribution with mean  $\mu$  and  $\sigma^2 = 0.16$ , where  $\mu$  is unknown. Consider the test for  $H_0 : \mu = 2$  against  $H_1 : \mu = m$ , where  $m$  is some real number larger than 2.

- (i) Find a rejection criteria for the test using  $Y = \sum_{i=1}^{100} X_i$  such that the probability of Type-I Error is 2.28%.
- (ii) Using the rejection criteria in (i), estimate the smallest possible value of  $m$  such that the power of the test is at least 90%.

**QUESTION 3.****(25 Marks)**

- (a) The joint PDF of two random variables  $X$  and  $Y$  is given by

$$f(x, y) = \begin{cases} \frac{3}{16}(x+y), & 0 \leq x \leq 2, 2-x \leq y \leq 2; \\ 0, & \text{elsewhere.} \end{cases}$$

- (i) Find the marginal PDF of  $Y$ .
- (ii) Compute  $\mathbb{E}[X|Y=1]$ .
- (iii) Compute  $\mathbb{P}(Y > X)$ .

- (b)  $A$  and  $B$  decide to meet at a certain location after 12pm. The time taken (starting from 12pm) for each of them to arrive are independently distributed according to an exponential distribution with mean  $\theta = 1$  hour. Find the probability that the first one to arrive has to wait longer than 10 minutes for the second one to arrive.

**QUESTION 4.****(25 Marks)**

- (a) Let  $X = Z^2$ , where  $Z \sim N(0, 1)$  is a standard normal random variable. Let  $M_X(t)$  be the moment generating function of  $X$ . Recall that the PDF of a normal random variable  $Y \sim N(\mu, \sigma^2)$  is given by  $\frac{1}{\sigma\sqrt{2\pi}}e^{-\frac{(y-\mu)^2}{2\sigma^2}}$ .

- (i) Using the definition of moment generating function, compute  $M_X(t)$ . Assume that  $t < \frac{1}{2}$ .
  - (ii) Can  $e^{-2t}M_X(t)$  be a moment generating function of some random variable? Justify your answer.
- (b) Let  $D_\theta$ ,  $0 < \theta < 1$ , be the discrete distribution with the following PMF:

$x$	1	2	3
$p(x)$	$1 - \frac{2\theta}{3}$	$\frac{\theta}{3}$	$\frac{\theta}{3}$

Let  $X_1, \dots, X_n$  be i.i.d drawn from  $D_\theta$ . Consider an estimator for  $\theta$  given by

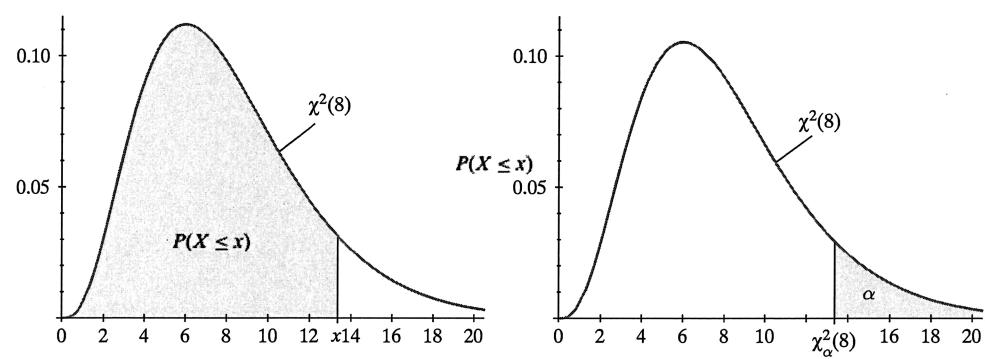

$$\hat{\theta} = \frac{2}{3n} \sum_{i=1}^n X_i.$$

- (i) Compute the bias and standard error for  $\hat{\theta}$ .
- (ii) Find  $\hat{\theta}$  using the observations  $x_1 = 1, x_2 = 1, x_3 = 2, x_4 = 3$  (here  $n = 4$ ).
- (iii) Find an estimator of  $\theta$  which is unbiased, i.e. it has zero bias.

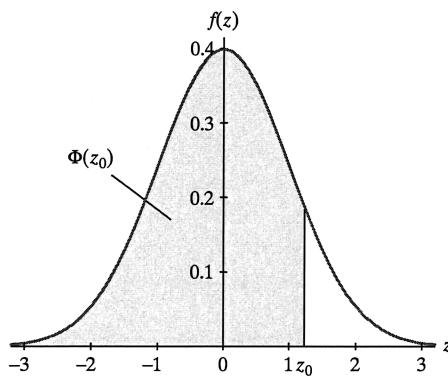

END OF PAPER

## Appendix

**Table IV** The Chi-Square Distribution

This table is taken from Table III of Fisher and Yates: *Statistical Tables for Biological, Agricultural, and Medical Research*, published by Longman Group Ltd., London (previously published by Oliver and Boyd, Edinburgh).

**CONFIDENTIAL**

**MH1820 INTRODUCTION TO PROBABILITY & STATISTICAL METHODS**

Please read the following instructions carefully:

- 1. Please do not turn over the question paper until you are told to do so. Disciplinary action may be taken against you if you do so.**
2. You are not allowed to leave the examination hall unless accompanied by an invigilator. You may raise your hand if you need to communicate with the invigilator.
3. Please write your Matriculation Number on the front of the answer book.
4. Please indicate clearly in the answer book (at the appropriate place) if you are continuing the answer to a question elsewhere in the book.
